

Obstetric Medications

Complete drug information forms for each of these medications. Keep copies on the days you are assigned to L&D or M/B. Highlight the medications that your patient has been prescribed and use the sheets as a resource when you administer medications. If your patient receives medications that are not listed, research them in your drug book and complete additional drug information forms for submission with your clinical log. Be sure to complete the last column for any drugs that your patient receives (even if the gave it) before you turn in your log.
