APPENDIX

Data Source

Because longitudinal data are not accessible in Banner, this year's Student Characteristics and Enrollment Trends come from Cuesta's submitted MIS files. Here are some of the advantages associated with using MIS data rather than Banner data:

- 1) MIS data allow us to explore five years (or more) of data, whereas Banner data only go back to Fall 2008 precluding any longitudinal analyses.
- 2) MIS data, though not perfect, must pass rigorous syntactical and referential tests prior to upload. Moreover, MIS data are consistent over time. On the other hand, Banner data are neither subject to the same syntactical and referential rigor nor do they provide for consistency prior to Fall 2008.
- 3) MIS data have a clear data element dictionary, which explains the meanings of each variable; it is available here: [DED](#) . Banner data do not have a data element dictionary that can be referenced. Finding the meaning of a variable in Banner is done using the heuristic of trial and error.
- 4) MIS data represent our official college data. In most cases, the data reported from the raw MIS files will match exactly those reported on the chancellor's office website. MIS data also feed our federal reporting of IPEDS data. Banner data do not match MIS data. This discrepancy between our publicly reported state MIS data and our internal Banner data can lead to confusion among faculty, staff, students, and community members, etc.

Additional Resources

For an overview of the MIS database design click here: [MIS DATABASE DESIGN](#)

For the entire MIS data element dictionary click here: [MIS DATA ELEMENT DICTIONARY](#)
